Working Prototype Known Problems Report - CSE115A

Project: RentMyJunk
Team: RentMyJunk development team
Date: 02/12/2019

Functions not working correctly:

- [Authentification] The console shows "Error 500" if the authentication cookie refers to a non-existent user in the database.
    - Steps to reproduce: Register, and log in. Then delete the user from the database. While the cookie is still alive, and that you are not connected, it will show "error 500" in the browser console. The website works properly even with this error.
    - Github issue: https://github.com/ntjandra/cse115a/issues/57
    - How to fix it: We could simply log a message saying that the user specified by the cookie is no longer in the database.
- [Reputation] Buttons to rate a profile are showing up even if the user is not logged in
    - Steps to reproduce: Go to someone's profile
    - Github issue: https://github.com/ntjandra/cse115a/issues/59
    - How to fix it: Check if there is a user logged in, if not, hide the buttons
- [Reputation] "Rate this user" is showing up on your own profile
    - Steps to reproduce: Log in, and go to your profile
    - Github issue: https://github.com/ntjandra/cse115a/issues/60
    - How to fix it: Check if there is a user logged in, if it is the same user id as the profile, then hide "rate this profile"
- [Images] If a user does not have an avatar, it does not show a question mark
    - Steps to reproduce: Register a user without avatar
    - Github issue: https://github.com/ntjandra/cse115a/issues/61
    - How to fix it: If the user does not have an avatar, we have to display a question mark instead
- [Register] If a user registers with an already used username, it should send an error
    - Steps to reproduce: Create a user, and then another one with the same username (but different email)
    - Github issue: https://github.com/ntjandra/cse115a/issues/63
    - How to fix it: check if the username is already used, if so, send an error message (the same way as we did for the email)
